

Release 3.6.5 - October 16, 2002

No.	SIR	Submodule	Issue Description	Status
1	APR00129	Annual Performance Report (APR)	In the APR submodule, a new Tribe/TDHE Contacts business function will be created to insert and display contact information as an enhancement to give PIC the ability to store and create mailing labels through the APR system's reporting functionality.	Approved: Ready For Release
2	PSS01383	Annual Performance Report (APR)	In the Annual Performance Report Submodule, an invalid days in review count is displayed for an APR. After this fix, the days count will display a valid date based on the current date and the received date of the APR	Approved: Ready For Release
3	PSS01407	Developers Suite	In PICSECURITYDB, changes are needed to enhance the tracking of ASP, COM, Stored Procedures and Database objects. After this fix, various tables will have modified column headings and three new tables will be added.	Approved: Ready For Release
4	PSS01206	Housing Authority	In the the Housing Authority submodule, users were unable to submit the Occupancy Report for approval and an error was displayed stating 'The ASP provided invalid input to the component.' After this fix, users will be able to submit an Occupancy Report for approval without receiving any error messages.	Approved: Ready For Release
5	PSS01380	Housing Authority	In the Housing Authority submodule, the HA Contact Address ASP page does not save the user-entered values in the NTPIC12 (mock production) region and returns an ASP error page. After this fix, the system will save the address values after the user enters them, and after refresh the page will repaint with all values displayed	Approved: Ready For Release
6	PSS01396	MTCS	Enhancement: New indexing fields will be added in the p113pt_ph_unit and p113pt_ph_unit tables.	Approved: Ready For Release
7	PSS01080	Reference	In the Reference submodule, JavaScript/VBScript commands (i.e. malicious code) entered in the Text box or Text area control on any page are being executed when the page is repainted. After this fix, these scripts will appear as pure text and will not execute when the page is repainted. (Original reference PSS00622)	Approved: Ready For Release
8	PSS01095	Reference	In the Reference submodule, if a text field contains a single quote (') then the system will return an ASP error page when trying to pass a variable. After this fix, a single quote will display on the page as entered. (This SIR was discovered through PSS00318)	Approved: Ready For Release
9	PSS01403	Reference	In the Reference submodule, after the user clicks the 'Save Changes' button on the refmodulesummary.asp the page repaints with plain text error '2010,' a COM error message, and changes are NOT saved. After this fix, the 'Save Changes' button will function properly without returning any errors and text changes entered in the text boxes will be saved. N.B.	Approved: Ready For Release
10	PSS01438	Reference	The referencecodesmanage.asp is not being displayed in the Reference submodule when the user selects a code name of 'Participant Program Area.' Once this issue is resolved the ASP page will be displayed with no errors or warnings.	Approved: Ready For Release
11	PSS01081	Security Administration	In the Security Administration submodule, entering and saving malicious code, such as JavaScript/VBScript commands, in either a textbox or text area control returns an ASP error page. After this fix, the malicious code should not attempt to execute but instead save as pure text.	Approved: Ready For Release

Release 3.6.5 - October 16, 2002

No.	SIR	Submodule	Issue Description	Status
12	PSS01096	Security Administration	In the Security Administration submodule, if a text field contains a single quote (') then the system will return an ASP error page when trying to pass a variable. After this fix, a single quote will display on the page as entered. (This SIR was discovered through PSS00318)	Approved: Ready For Release
13	PSS01435	Security Administration	A 9605/9606 error is occurring in the Security Administration submodule for users that have access to more than one level of security. Once this issue is resolved a security user will have the ability to view or add additional security access to users.	Approved: Ready For Release
14	MTC01217	MTCS - Viewer	to display unit/mailling address in Unit to be Occupied	
15	MTC00768	Form 50058 - Submission	Overlapping Effective Dates
